

## ABOUT B3D DESIGN

B3D Design is a high-end creative animation and film studio specialising in custom productions for industrial clients, with a particular focus on the Gas, Oil, Energy and Development sector in the onshore and offshore business.

Based on our 20 years of hands-on experience with the world's foremost engineering and contracting companies, our visual creations communicate their messages with clarity, ingenuity and stunning impact.

## FILM PRODUCTIONS

### - Filming - Drone - Photography - 360° recording - Timelapse

Most of our clients operate within the offshore and near-shore industries.

Combined with our highly experienced camera team and our intimate knowledge of the complexity of those specialized operations, we have created eye-catching film productions for a large number of marquee projects and customers worldwide.

Our services range from script writing, storyboarding, filming and post-production to encoding and authoring.

We use the industry's most advanced equipment, such as motion stabilization, time-lapse cameras and state-of-the-art filming drones, to give you eye-popping results. In challenging, high-wind conditions, we can offer manned aircraft photography and, when required, even helicopter-mounted Cineflex capabilities.

B3D Design's experience is international in scope, encompassing Africa, Australia, the Middle East, Southeast Asia and Europe.

## 3D VISUALISATIONS

### - Animations - Art impressions - Virtual Reality - Surveys

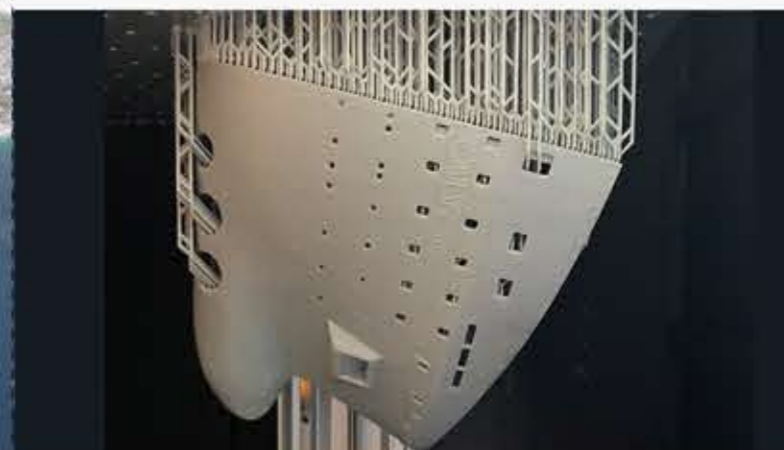

After 25 years of experience using the latest 3D hardware and software, specialising in remarkably realistic water simulations, we have risen to the top of our industry in creating photo-realistic animations that truly bring your audience into the heart of the action.

B3D Design creates visualisations with photo-realistic accuracy, specialising in above- and underwater environments.

By utilising our leading-edge software and hardware tools, we have created a massive 3D model library containing a wide variety of vessels and physical objects used in the offshore and near-shore industries.

This library will continue to grow as these industries expand the scope of their innovative equipment.

## 3D PRINTING

### - High-definition scale models - Rapid prototyping - Engineering models

Imagine owning a full-color, museum-quality scale model of the pride of your fleet! The use of 3D printing opens up a world of possibilities to showcase your vessels' capabilities to corporate visitors and to potential clients.

We'll build you an impressive show model or even small test parts for engineering studies.

The intricacy of the high-definition detail brings an unexpected level of realism to the product. Potential industrial applications may involve product prototyping, demonstrations or test models.

With your blueprints and engineering data to validate your designs before you even begin ship construction, we take the guesswork out of the equation.

B3D Design is already renowned in the offshore industry for our amazing, lifelike animations.
